

Create a PowerPoint slideshow with narration on Windows

- 1- Open your PowerPoint presentation (your presentation must be already written)
- 2- Check the volume of your microphone and test it
- 3- To start the recording of the voice narration
 - PowerPoint Slideshow tab, select "**Record slideshow**" then click "**Start recording at the beginning**"

- Then click on "**Start recording**"

The recording starts directly. You can pause, repeat, or move to the next slide

Note: PowerPoint does not record audio during slide transitions, do not speak when moving to the next slide. Make a brief silence at the beginning and the end of each slide to make transitions more fluid so you do not truncate the narration.

- You can edit one or several slides by selecting it and by clicking on "**start recording from current slide**"

- 4- Save your slideshow

Once the PowerPoint narration is complete, you can "**Save as**" :

1. **Editable** "Presentation PowerPoint (*.pptx)" format
2. **Not Editable** "PowerPoint slideshow (*.ppsx)" format
